MP100 | FINAL PROJECT STATEMENT

Title: Summer in New York City
Semester/Year: Spring 2025
Coding/programming languages: HTML/CSS
https://johnny-s01.github.io/mp100_final/

For my final project in MP 100, I created a multimedia website titled "Summer in New York City". This site presents five of the most iconic places to visit during the summer: The Vessel, Brooklyn Botanic Garden, Top of the Rock, Little Island, and Luna Park. Each page includes a combination of media elements such as images, videos, and emojis, where the Statue of Liberty icon functions as a home page to create a visually dynamic experience. The project is built using HTML and CSS with a dark mode design that represents most of the modern websites that have that feature, like real-world tourism websites. Each location page contains facts, fun details, maps, and embedded videos to highlight what makes each destination special during the summer season.

The inspiration came from my personal desire to explore these places after recovering from my foot surgery. One of the biggest challenges was formatting the layout and designing the CSS to look minimalist and up-to-date. I solved it by doing research on the Web Development Resources provided in the course
